

Business Energy Savings Program

Retro-Commissioning Incentives: Leak Survey & Repair

Bring new life to existing buildings with Evergy's energy efficiency program.

Evergy offers a streamlined Leak Survey & Repair incentive for compressed air systems. Simply survey and repair leaks in the compressed air system and receive 8¢ per kWh reduced, up to 100% of total survey and repair costs. Taking advantage of the Leak Survey & Repair incentive is a great way to see savings quickly, and to establish an accurate baseline before getting started on other RCx projects.

Please note, RCx Study Incentives are available only to those completing RCx measures. The Leak Survey and Repair measure is considered separate from the full RCx Incentive process, but may be implemented prior to conducting an RCx study. Those who complete a Leak Survey & Repair will not need to reapply in order to pursue additional RCx Incentives; instead, they will move forward with the same project.

Just a Few Easy Steps:

1. Customer completes online Pre-Application.
2. Site visit with Business Development Representative.
3. Application sent to customer.
4. Retro-Commissioning Service Provider (RSP) conducts Leak Study & Repair.
5. Customer and/or RSP completes and submits application.
6. Evergy completes post-inspection.
7. Evergy issues finalized incentive.

Note: All repaired leaks must be tagged during Step 4 and left for post-inspection.

Get Started Saving

If it saves energy, chances are it qualifies for an incentive. Contact your preferred contractor, Trade Ally or Business Development Representative below, call (866) 847-5228 or email businessrebates@evergy.com for more information on all available incentives.
